PROJECTS

SpeakAni.me – link github

- Designed and wrote all code for anime discussion board website using Vue.Js and Node.Js
- Wrote a system to upload data (comments, thread information, etc) to a Firebase Firestore server
- Fetched simulcast data from the Jikan API to use for currently airing anime (title, thumbnail, broadcast day)

MoraStats – link github

- Built a website with Angular to check user's Spotify data
- Authorized user to ask for permissions to be granted, stores token in local storage and automatically logs out once expired
- Fetched data from Spotify's API (user's profile, most listened to songs/artists etc)
- Displays song that the user is currently playing and allows user to play it within the Spotify app

Pixel Weather – link github

- Created a website to tell user the weather
- Implemented WeatherAPI to fetch data (temperature, time, location and weekly forecast)
- Programmed graph to chart hourly forecast for the current day
- Heavy string manipulation to display accurate time for AM and PM

UX Design – link

- Portfolio for prototypes and designs created in Figma and AdobeXD

CERTIFICATION

Google UX Design Certificate, Coursera, 2023

Completed Google's Coursera course and received certification for UX Design

EDUCATION
